

# Powering potential, faster

QA's Frontloaded Apprenticeships are here.

## YOUR CHALLENGE

As the digital skills gap continues to grow, recruiting and re-skilling your workforce to become effective in brand new digital skills involves time, effort and investment.

You are looking to drive your organisation towards rapid growth, but to do this your team must acquire significant digital skills in a short period of time, or you need to recruit day one ready staff in a competitive marketplace. Turn your levy into work-ready talent through QA's Frontloaded apprenticeships.

## ACCELERATED DIGITAL APPRENTICESHIPS

QA's new Frontloaded apprenticeships have been designed to minimise 'off the job' impact, maximise day one readiness, and inject competitive and cutting-edge talent faster than your average apprenticeship. All of the learning elements of an apprenticeship that would usually be spread across the duration of a programme have been brought to the forefront.

Designed for a new cohort of talent, apprentices will have the opportunity to learn an extensive Data, DevOps and Software Engineering skill set quicker, allowing them to apply their newly acquired expertise to your organisation straight away.

**Accelerating your business towards digital transformation sooner has never been easier.**

## WHY CHOOSE A QA FRONTLOADED APPRENTICESHIP?

### Accelerated delivery

Learners get up to speed with learning content before they take on new workplace challenges, and gain a job-ready skill set at the completion of their Bootcamp component.

### Improved employer engagement

Learners and employers will agree how to plan for workplace application, ensuring learning makes an impact where it matters most.

### The keys to unlocking further potential

Learners will get full access to our unrivalled online learning platform, Cloud Academy, giving them the opportunity to advance their skills through 10,000+ hours of content, labs, quizzes and sandboxed environments.

### An award-winning delivery model

Through our award-winning Digital by Design (DXD) learner support model, 97% of our learners pass on 1st attempt. DXD ensures QA apprentices are successful and bring value to your business from day one.

### Unrivalled support for you, your managers and your learners

We partner with you through service delivery teams and digital learning consultants to support your business and learners to succeed in learning, have a positive impact on the job, and completing their apprenticeship.

# How does it work?

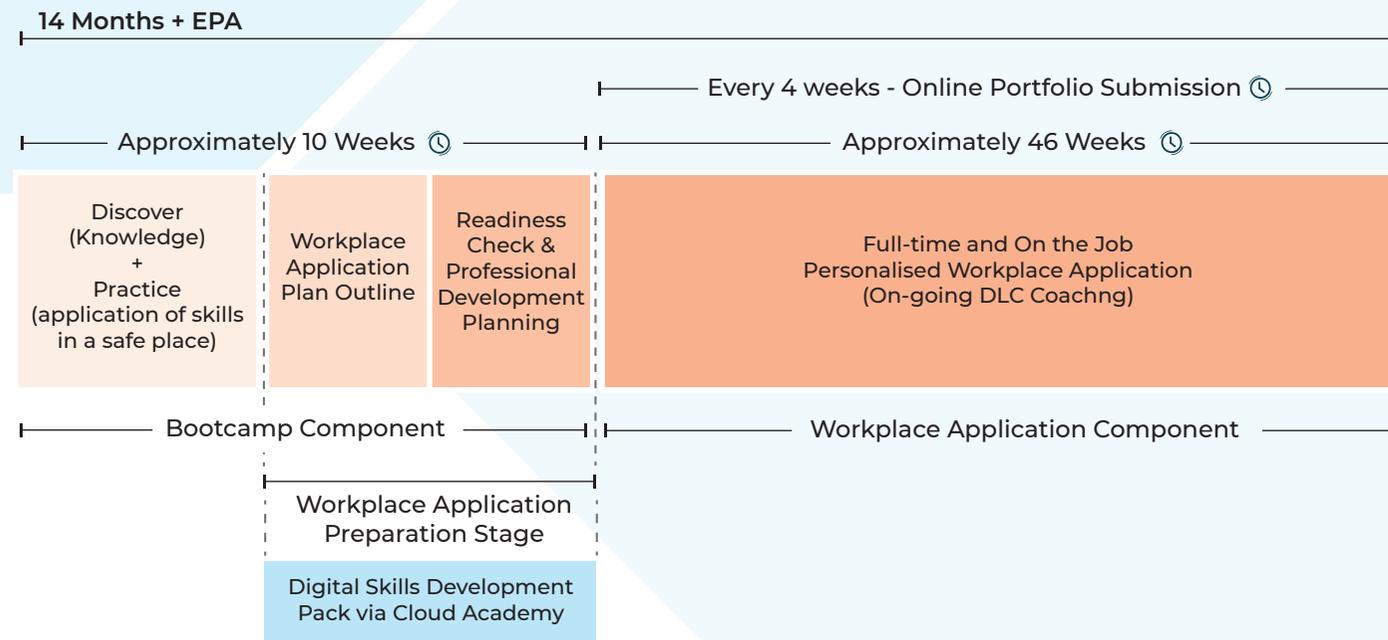

A unique model designed to arm your team with the expertise to bolt forward

This model is powered by our DXD delivery model, allowing for flexible delivery and tailoring the programme for the growth of the learner. Our programmes are insight and data driven, and offer full support for success.

The accelerated workflow model allows for apprentices to develop their knowledge foundation and practise their new skills there and then, through the components of the model where learners can practice in sandbox environments in each module.

Apprentices will have approximately 10 weeks of training before starting their new job.

Whilst on the job, apprentices will go through a Workplace Application Plan – meaning they will complete these activities in the order specified on their plan which will be aligned to their workplace activities or tasks.

We are an accredited training provider to deliver Microsoft, AWS and Google Cloud qualifications

## PROGRAMME DETAILS
